

## ACKNOWLEDGEMENTS

This research report could have not been completed without the help and support of so many. First and foremost, I would like to thank my PhD supervisor, Paul Nation for his continual support, and Rob Waring for whom I owe my career life to; through them are all sorts of research inspirations.

I'd like to thank my family: Daddy, Mom and my sister, Om for your love and support. Himajang the dog, thank you for sitting lazily around while I work. Your life is very nice but also pretty boring because you cannot do research.
