Year	2016

Abstract

The project aims to: 1) develop a monitoring system of learning through an app on an Android 2) evaluation system, 3) for the satisfaction of students who use the system. Participants were college students Kung Si. Grade 6 among the first group of 45 people with a sampling of tools including system monitoring academic performance through the application available on the Android operating system. A quality assessment And satisfaction surveys The statistics used for data analysis, mean (\bar{X}) and standard deviation (SD.).

The result of research are including

1. The monitor system of learning through application on android is useable efficiently.
2. The result of quality assessment of 3 experts with their opinions about The of monitor system of learning through application on android is good (\bar{X} = 4.40, SD. = 0.25)
3. The result of the user satisfaction's assessing on monitor system of learning through application on android In very satisfied. (\bar{X} = 4.49, SD. = 0.62)
